Profile (Software Engineer)

I build software like I'd secure a physical system: deliberate boundaries, intentional access, no unguarded surface. With a Mechatronics mindset and 5+ years across the stack, I engineer resilient products, internal architecture and external exposure both governed by zero-trust principles.
I architected a real-time negotiation marketplace with live voice/video, a gamified bargaining engine, and a full trust & safety layer (escrow, immutable audit trails, role-based access); hack-proof from the schema. I've led teams that drove a 90% SEO leap and 80% faster delivery, and now lead mobile engineering at a high-growth company, cutting security vulnerabilities by 70% while shipping AI-powered features. I map the real boundaries, functional and adversarial, then build with precision, empathy, and an obsession for systems that earn trust at scale. Looking to bring this security-first, architecture-obsessed approach to mission-critical products that protect millions.

Technical Skills

Languages: TypeScript, JavaScript, Python, Dart, SQL

Frameworks & Libraries: React, Next.js, React Native, Flutter, Node.js, Flask, Tailwind CSS, React Query

State Management: Redux, Zustand, GetX

Databases: Neon, Drizzle, PostgreSQL, MongoDB, Redis

DevOps & Tools: Docker, Kubernetes, AWS, Azure, Git, CI/CD

Testing: Jest, Cypress

Security: OAuth 2.0, JWT, Role-Based Access Control, WebRTC Security, Data Encryption, Secure-by-Design

Professional Experience

Chief Mobile App Engineer ***Mar 2025 – Present***

insureOnGo.com Ltd. (On Site)

- Led a cross-functional team to design and launch the insureOnGo mobile application across iOS and Android, reaching production in record time.
- Overhauled mobile security architecture, reducing vulnerabilities by 70% through zero-trust design, rigorous penetration testing, and code reviews.
- Integrated an AI-powered chat feature, boosting user engagement and streamlining customer communication.
- Accelerated feature delivery velocity by 80% by implementing agile workflows, automated testing, and CI/CD pipelines.
- Engineered robust, scalable solutions using Flutter and React Native, selecting the optimal framework per project requirements.

Frontend Engineer ***Jan 2024 – Jan 2026***

FreexiT Technologies (Remote)

- Built responsive, accessible UI components with Next.js, TypeScript, and Tailwind CSS, raising Lighthouse performance scores into the 90s.
- Strengthened application security, delivering a 70% reduction in critical bugs and security incidents through secure code reviews and defensive design patterns.
- Collaborated with cross-functional, geographically distributed teams to ship features consistently across multiple time zones.
- Integrated CI/CD pipelines, enabling zero-downtime deployments across staging, development, and production environments.
- Boosted overall project delivery efficiency by 80% by optimizing workflows and introducing performance benchmarking.
- Designed and delivered a comprehensive admin dashboard that streamlined system management for internal teams.

Frontend Engineer ***Feb 2024 – Jun 2025***

Alps (Remote), United States

- Spearheaded the end-to-end frontend development of a feedback and documentation platform, delivering a fully responsive, intuitive user interface.
- Implemented advanced SEO strategies including structured metadata and keyword optimization, resulting in a 90% improvement in search visibility.
- Architected a library of scalable, reusable components in Next.js, prioritizing maintainability and render performance.
- Partnered with the Backend Engineer to translate product requirements into elegant, user-friendly features.
- Contributed extensively during brainstorming sessions and product strategy discussions, directly shaping the roadmap.

Frontend Engineer ***Jul 2023 – Jan 2024***

Creos Community (Remote)

- Developed and maintained a responsive school management dashboard for the Curious Kidz project using Next.js and Tailwind CSS.
- Transformed design mockups into pixel-perfect, cross-device compatible interfaces, ensuring a seamless experience for hundreds of educators.
- Elevated team code quality by instituting structured code reviews and performance benchmarking, leading to a measurable drop in production bugs.
- Collaborated closely with backend engineers and the team lead to implement features that reduced administrative overhead for school staff.

Frontend Engineer ***Jul 2022 – Present***

Connectin Skillz, (Remote), United Kingdom

- Designed and delivered a scalable component library in React, cutting UI development time across multiple sprints.
- Optimized client-side performance through code splitting and lazy loading, reducing initial bundle sizes by 40%.
- Worked with backend engineers to define and enforce robust API contracts, ensuring seamless data integration.
- Embedded within agile sprints, rapidly incorporating user feedback and delivering production-ready features on schedule.

Side Projects

Real-time Marketplace Negotiation Platform ***(Flutter, Node.js, PostgreSQL, WebRTC, Redis)***

- Architected a live negotiation marketplace featuring real-time voice/video, a gamified bargaining engine, and a complete trust & safety layer (verification, escrow, immutable audit trails, role-based access control).
- Designed system-wide zero-trust boundaries, ensuring secure peer-to-peer connections and hack-proof financial data flows.
- Built an idempotent offer/counter-offer engine with full audit logging, enabling transparent dispute resolution.

King David Elites ***(Next.js, TypeScript, Tailwind CSS, REST APIs)*** **— Live Site**

- Developed a luxury e-commerce platform with advanced search, dynamic filtering, and product listing management.
- Built a custom pagination library from scratch and integrated third-party APIs for payment and inventory operations.
- Delivered a fully responsive, cross-browser experience tailored for high-end retail.

Gommerce ***(Flask, PostgreSQL, SQLAlchemy)***

- Collaborated on the backend of an open-source multi-vendor e-commerce platform, defining RESTful API schemas and role-based routing.
- Optimized database queries and contributed to architectural decisions that improved request throughput.

Education

Federal University of Agriculture Abeokuta ***Oct 2019 – Jul 2025***

Bachelor's Degree in Mechatronics Engineering

Udacity ***May 2022 – Aug 2022***

Full Stack Developer Nanodegree
